

(ISC)² File Format Guide

	PRINT	WEB	MS OFFICE	RGB	CMYK	RESOLUTION
eps.	X				X	NA*
jpg.		X	X	X		150 dpi
png.		X	X	X		150 dpi

*EPS. print

EPS files are usually used for print projects. Because they are primarily lines and color fills (as opposed to pixels) they can be used at any size and won't get distorted by scaling. They can be "rasterized", or converted into pixel graphics, if the appropriate software is used (Adobe Illustrator etc.) If you do this you will have to choose a resolution (or dpi), generally 72 dpi for web and 300 dpi for print. All EPS files in this pack are in CMYK color format unless otherwise noted.

JPG. web

JPG files are intended primarily for web or other digital. They do not have transparent backgrounds so, if not placed over white, they will have a white rectangle visible behind them. All JPG files in this pack are in RGB format.

PNG. web, PowerPoint, Word etc.

PNG files have a transparent background which allow them to be placed over colors or other graphics. This ability makes them perfect for PowerPoint and Word. All PNG files in this pack are RGB format.
